

Quiz Master - V1

MAD-I Project

IITM BS Degree Program

Indian Institute of Technology Madras, Chennai

Tamil Nadu, India- 600036

Name: **Anirban Mandal**

Roll number: **23f2004053**

student email: **23f2004053@ds.study.iitm.ac.in**

Description

The whole project revolves around the idea about creating an app which will help the students to prepare for their exams by allowing them to give mock quizzes. There will be an administrator who adds different courses and the exams for them.

Technologies Used

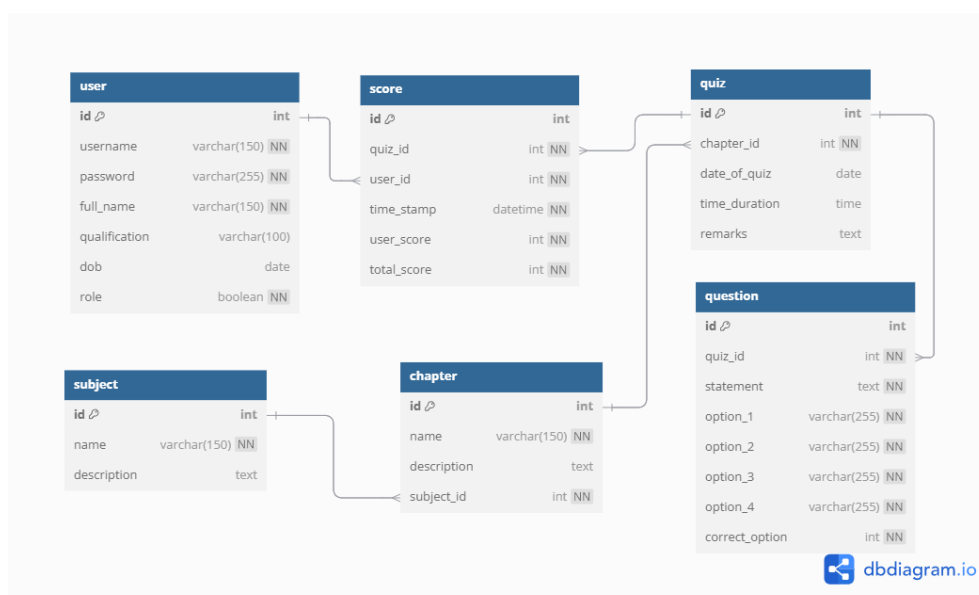

Front End: HTML, CSS, Jinja2, Bootstrap

Back End: Flask, Flask-SQLAlchemy

Database: SQLite

I have used the Flask framework to design the backend of the app. The jinja templating helped to make the template webpages which in turn is rendered dynamically with the help of Flask and the integration of SQLAlchemy with the Flask-SQLAlchemy extension made it possible to connect the databases.

DB Schema Design

Architecture and Features

The app has only one superuser and any other superuser/admin account can't be registered. It will be directly made whenever the database will be created. The superuser/admin is responsible to control the flow and everything regarding the exams and so is also referred as the Quiz Master.

Admin Dashboard Features-

- Can create/update/delete subjects
- Can create/update/delete chapters under each subject
- Can create/update/delete quizzes under each chapter
- Can create/update/delete as many questions under each quiz
- Can edit/delete user details
- Check which user has attempt which quiz at what time and along with their marks
- Can search through in the Subjects and Quizzes using their name and id respectively
- Can search through the users and scores over many attributes

User Dashboard Features-

- Can search the quizzes/scores
- Attend and give a certain quiz many times a by the deadlines
- If the user does not submit the question within the given time of the quiz it will be auto submitted

Extra Features-

- Front end validation using HTML forms has been implemented so only desired type of data can be inserted in.

- Added backend validation by storing the current user id in the current session to prevent unauthorised access in both admin and user dashboard
- The quiz time limit is optional so the admin can create practice question sets with no time limit for the user. Moreover quiz can have a deadline, upon crossing the set deadline the user can long sit for that quiz.
